

## **BELDEN EXPANDS ITS LEADERSHIP POSITION IN THE BROADCAST SEGMENT**

**RICHMOND, IN** – Belden has added Telecast Fiber Systems, a leader in fiber optic video technologies serving professional broadcast industries, to its product portfolio.

Bringing our two companies together will help you capitalize on the need for mixed copper and fiber solutions and growing bandwidth demands in “live entertainment” applications. Because you demand high quality, speed and ease of use in your signal transmission technologies, you can count on Belden and Telecast to provide a complete copper-to-fiber architecture to help easily and cost effectively deliver maximum performance in broadcast applications through lighter cable runs, expanded camera performance and faster deployment.

Telecast’s technologies include audio multiplexers, portable HD and SD broadcast systems, camera adapters, transceivers and more. Building on Belden’s strong cable, wireless, connectivity and project management capabilities, this acquisition will enable us to better serve as your full-solution partner.
